- Follow the universal infection control precautions.
- Encourage mothers to breast feed whenever possible.
- Maintain optimal nutrition for children either enteral or parenteral.
- Encourage and facilitate parent child bonding.
- Assess and manage pain.
- Record and report any detected abnormality.
- Prepare parents for discharge and home care.
- Provide health education & follow up
- Document findings, nursing care & abnormalities

ACTIVITIES

- In our college an advanced skill lab aims at teaching and training students with the essential advanced nursing skills
- This Lab helps the use of skills taught by repeated practice on mannequins.
- The skill lab clearly defines the learning outcomes against each activity being demonstrated.
- This helps the nursing supervisor to strengthen their weakness in particular skills.
- It helps to reinforce their knowledge through repeated practice of their procedure on mannequins.
- The instructors are there to assist students on a one to one basis, as they work through the skills of procedures using different learning.
