

SGRR UNIVERSITY COLLEGE OF NURSING
PATEL NAGAR, DEHRADUN.
OBSTETRICS AND GYNAECOLOGICAL NURSING
LABORATORY

Aim:

1. The aim of the Obstetrics and Gynaecology Nursing Laboratory is to promote safe, knowledgeable and effective nursing care by demonstrating and reinforcing the highest level of performance and readiness.
2. It also helps the students to acquire knowledge and skills in rendering nursing services to normal and high-risk pregnant women and to antenatal, intranatal and postnatal periods in hospital settings.

Objectives:

Upon completion of the laboratory rotations the students will be competent in performing different procedures through using different models & simulators available in the Obstetrics and Gynaecology Nursing Laboratory and they will be able to:

1. Identify the anatomical parts in both male & female reproductive system through using models (bony pelvis & soft tissues) and video tapes.
2. Identify different stages of fetal development using different fetal development models.
3. Perform complete physical assessment for women during antenatal period through using full body simulator and posters.
4. Assess the parturient physical condition & the progress of process of normal labor through using interactive childbirth simulator, and different models available in the lab.
5. Perform complete physical assessment for women during postpartum period through using full body simulator & childbirth simulator.
6. Prepare delivery set and instruments and equipments needed during labor.
7. Use the full body pregnant simulator to demonstrate the different fetal positions attitudes, lies, and presentations.
8. Use different interactive childbirth simulator to help students to formulate nursing care plan according to each scenario.
9. Perform physical examination & resuscitation for the new-born using interactive childbirth simulator.
10. Assess any deviation from normal during labor using interactive childbirth simulator
11. Assess female genital system to help students dealing with women having any gynaecologic problem.

12. Identify different instruments used for obstetrics and gynaecological procedures.
13. Apply universal infection control precautions & safety measures while providing care to the women during antenatal, labor & postpartum, newborn, as well as women who have any gynaecological problem.
